

Public and Commercial Buildings

We take advantage of our unique technologies and expertise in safety, durability, non-combustibility, as well as the provision of a comfortable sound environment that we have cultivated as a housing material manufacturer in order to proceed with proposals for spaces by product series that offer the functions required by each public facility and commercial building.

Offices

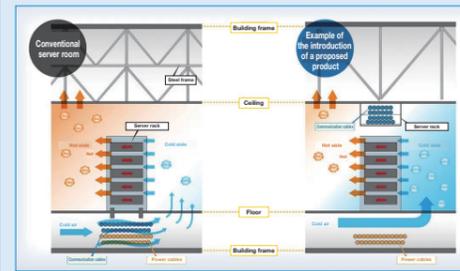

With the diversification of workstyles, office spaces have become not only the places to conduct business but also the places for which the elements of comfort in working, such as the improvement of comfortableness, safety, and productivity, are held to be important. We aim at creating comfortable and pleasant offices to work through the proposals of the needs of the sound environment and communication spaces that are specific to offices.

Initiatives for the improvement of the sound environment and the use of wood in interior finishing in point 0, a co-creation consortium with other companies

We focus on well-being in point 0 marunouchi, which is operated by point 0, and are conducting demonstration experiments toward the creation of office spaces that will lead to the improvement of the comfortable sound environment as well as the improvement of spatial value by using wood in interior finishing. In addition, at the co-creation consortium, point 0, IoT network infrastructure and data held by the participating companies are shared on the platform, aimed at creating new value with the keywords of efficiency/comfort, creation, and health.

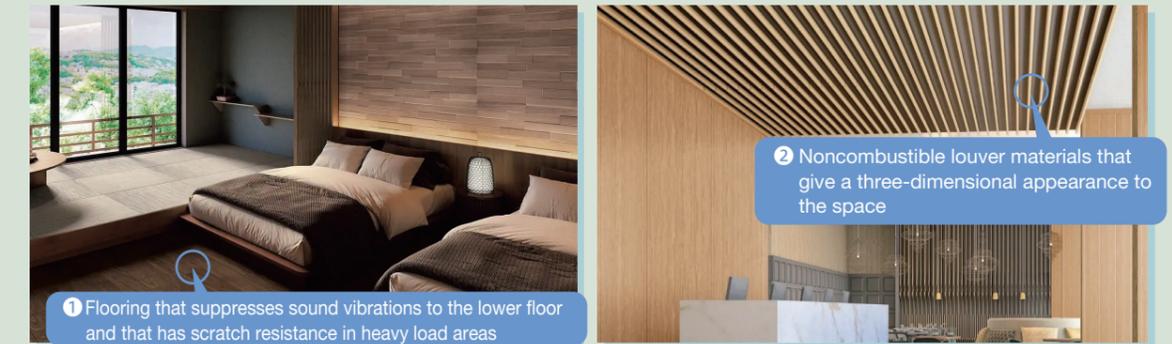

Toward the realization of the development of spatial solutions for the workspaces that will improve productivity and comfort, such as the development of well-designed OFF TONE Magnet Panel that combined the printing technology and our sound absorbing panel, verification of the effects of the sound environment improvement and productivity improvement by using wood in interior finishing, and consideration of the office facilities that will contribute to the improvement of workers' comfort and health based on the idea of well-being, we will accelerate the process from planning to development and sales.

Accommodation facilities

While the number of accommodation facilities, such as hotels, inns, and private lodging, has been increasing with the increase in demand from inbound tourists, spaces with hospitality are required more than ever. We contribute to the improvement of lodger satisfaction by simultaneously pursuing the interior decoration nature that produces the atmosphere of the facility and the functionality that solves sound problems unique to accommodation facilities.

An accommodation facility to create with DAIKEN <https://www.daiken.jp/qr/bm/hotel.html>

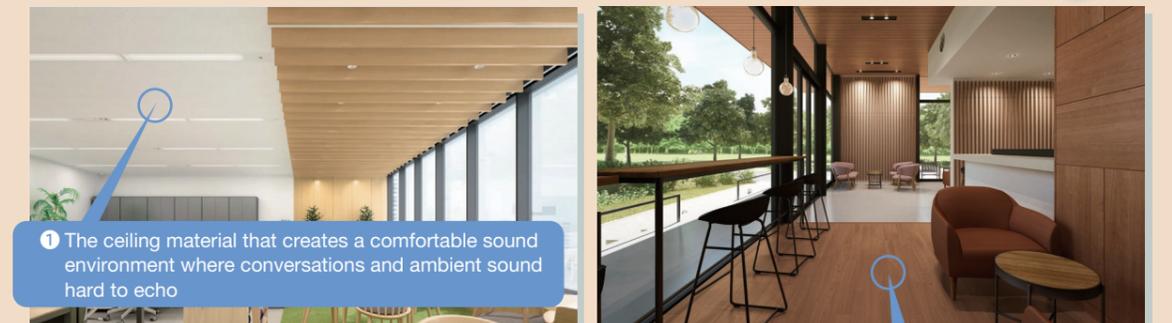

Hard to sunburn	Hard to get dirty
<p>It was exposed to ultraviolet light to the extent that is equivalent to about two years, but it did not fade in color.</p>	<p>Even after spilling soy sauce and leaving it for 20 minutes, it hardly got stained because of its water-repellent property.</p>
It is hard to get moldy	It is resistant to scratches
<p>Even after 14 days since culturing molds, generation of molds occurred slightly.</p>	<p>Its surface is hard to wear out, and frays and scuffing occurred slightly.</p>

Commercial facilities

At commercial facilities used by a large number of unspecified people, ease of cleaning and maintainability in the facilities, in addition to the high level of interior design, are regarded as important. We help produce hybrid spaces where facility users can comfortably spend time and operators can keep and maintain cleanliness.

Public and Commercial Buildings

Kindergartens and childcare facilities

There are rooms in kindergarten buildings to be used for a wide variety of purposes, such as the nursery room and playroom. We solve the issues required in designing kindergarten buildings with our diverse products, such as kids door, that reduces the risk of getting injured and flooring that is resistant to scratches and dirt, and contribute to creating facilities where kindergarten and nursery school children and teachers can use with peace of mind.

1 The sound absorbing panel that you can choose the color and shape according to the indoor atmosphere

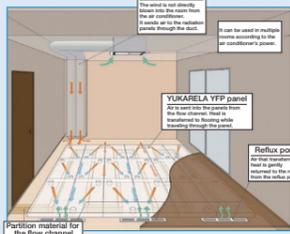

2 Kids Door with extensive safety-conscious functions, such as the prevention of catching a finger and observation windows

3 The cooling and heating system that hardly causes temperature unevenness and kicks up dust

YUKARELA, a floor radiant cooling and heating system <https://www.daiken.jp/qr/bm/flooring/yukarira/>

Educational/public facilities

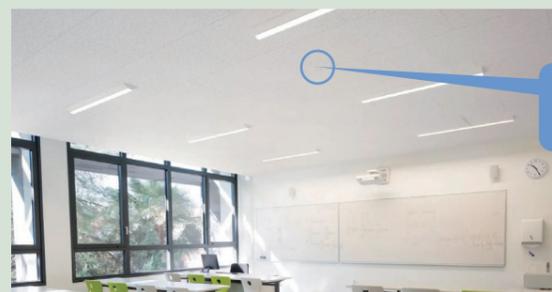

Educational/public facilities where local people gather require safety performance, such as aseismic performance, and building construction on which inclusive design is reflected in order for everyone to be able to easily use. We also support the construction of buildings as symbols of the local communities that users can become familiar with or have an emotional attachment through the adoption of building materials and design that use local materials.

1 Flooring that realizes the use of local materials with the WPC technology

2 The system ceiling for hallways that keeps people safe in the event of an emergency

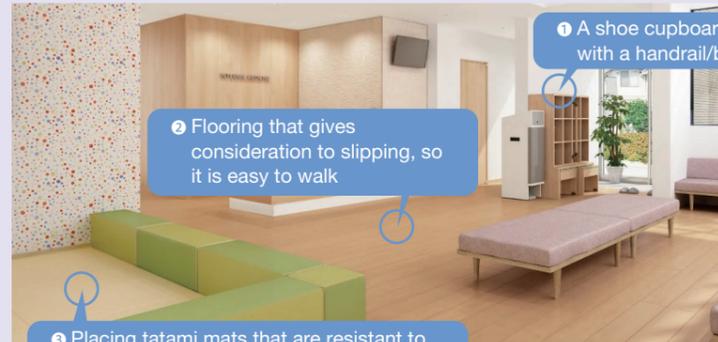

3 Sound absorbing ceiling board for educational facilities that enables people to easily hear a speaker's voice

Medical facilities

Clinics and medical offices are places where those having health problems visit and spaces to be able to support an uneasy mental state is required. Not only cleanliness and hygiene measures but also improvement of the sound environment to make sure that sensitive conversations will not be leaked attract attention.

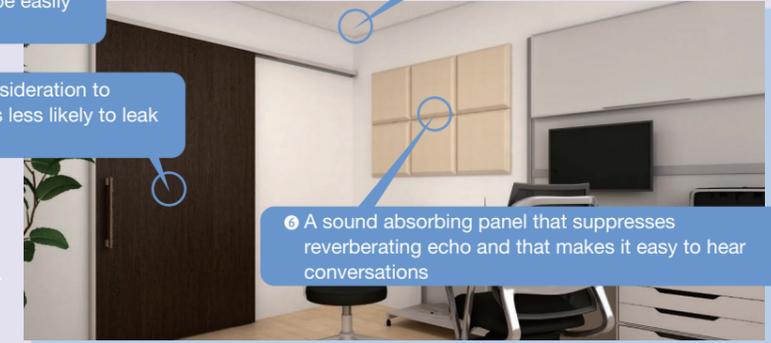

1 A shoe cupboard that comes with a handrail/bench

2 Flooring that gives consideration to slipping, so it is easy to walk

3 Placing tatami mats that are resistant to dirt and scratches and that can be easily installed

4 The ceiling material with high smell reduction effect

5 An overhang door that gives consideration to speeches and privacy and that is less likely to leak sound

6 A sound absorbing panel that suppresses reverberating echo and that makes it easy to hear conversations

Information on the products for medical facilities <https://www.daiken.jp/qr/bm/medicalfacilities/>

Elderly facilities

At facilities where the elderly live, building materials that are different from those used for general houses, such as fall prevention and measures against infectious diseases, are required. We address the issues of the facilities with our functional products that give consideration to the safety of users, such as a door having a wide frontage where wheelchair access is assumed and a handrail that helps walking.

1 A space-saving wide sliding door that secures a wide frontage

2 A handrail to which antiviral treatment is given as a measure against infectious diseases
